PARTICIPATION HAS ITS BENEFITS

The Obras Por Impuestos (Public Works Through Taxes) program, or Law 29230, benefits regional and local governments, private companies and local communities. Here's how:

For Regional and Local Governments, the program:

- Advances financial resources that are discounted from the following four years' budget once the public work is complete.
- Allows the reallocation of staff to other projects.
- Accelerates how quickly public works are carried out, sustaining or strengthening the local economy.

For Private Companies, the program:

- Demonstrates exactly where and how their taxes are contributing to local communities.
- Accelerates public works that could improve the competitiveness of companies. For example, better roads improve access to local markets making it easier to transport supplies.
- Improves the efficiency of their sustainability programs and allows companies to recuperate their entire investment.

For Local Communities, the program:

- Speeds up socioeconomic development, accelerates investment in infrastructure and improves the quality of public services for locals.
- Generates direct and indirect employment through construction work and, once a project is complete, through maintenance of the public work.
- Infrastructure improvements attract companies to the community and generate new business opportunities.
